Two stated to have been hit. ??? GL equipment on site. All firing was done with GL bearings & no manual laying. We were instructed to engage every GL target possible. 27 salvoes of 4 rounds were fired, the plots & heights being relayed to GOR. At 2250 hrs the target engaged was reported by GL to have been hit and its engines cut out. This was on bearing 270 travelling west. At 2345 hrs GL reported that our salvo broke up the formation and at 0230 hrs a place receding at bearing 195 lost height rapidly after being engaged. It was noted that on almost every occasion the GL bearing & that indicated by the S/liahts differed, sometimes as much as 15°.
